- Developed, in **2 weeks** versus **1 month**, project proposals through effective scheduling and division of tasks (**50%** fewer human resources involved, **50%** increase in the number of proposals). This is relevant to software development because it allows me to get projects done efficiently.
- Elaborated, in **2** versus **5 days** per worker, technology surveillance reports through new methodology and software packages (**100%** increase in studies made). This skill taught me how to talk to clients about their products, compare them to similar ones, and develop supporting documentation, which may be useful in software development.
